

Adobe FLASH CS4 ESSENTIALS

2 Day Course

Flash CS4 Professional software offers exciting new animation and collaboration tools, such as object-based animation, inverse kinematics, 3D translation and rotation tools, XFL support, and the ability to publish to the Adobe AIR™ runtime.

The course provides an introduction to the new features and functions available from Flash CS4. Learn how to design Flash projects with sophisticated animation, import video and sound files, and integrate buttons with compelling interactivity using ActionScript 3.0. Benefit from the improved object-based animation - the time required to transform images into animated symbols using Flash CS4 Professional is now reduced to seconds in comparison to earlier versions.

Who should attend

This course is designed for delegates who are familiar with the fundamental aspects of working with a computer, its' operating system and typical software features such as using menus and open, closing and saving files.

No prior experience of Flash is required.

The course on each day runs from 9.30 am to approximately 4.30pm.

COURSE CONTENT

- **Overview of Flash Content, File Types, Workflows & Delivery Options**

- FLAs, SWFs,
- Bitmaps,
- Sound, Video,
- Web Delivery,
- Standalone Delivery.

- **Getting Acquainted:**

- Work Area,
- Library,
- Timeline,
- Property Inspector,
- Previewing,
- Publishing.

- **Working with Graphics**

- Strokes, Fills, Gradients, Patterns, Transparencies & Text.

- **Creating and Editing Symbols**

- Importing Illustrator and Photoshop files,
- Symbols, Color Effects, Blends,
- Filters, 3D Space.

- **Adding Animation**

- Animating Position, Pace, Timing,
- Transparency, Filters, 3D Motion.

- **Creating Interactive Navigation**

- Buttons,

- Event Handlers with ActionScript 3.

- **Working with Sound and Video**

- Using Sounds,
- Flash Video,
- Adobe Media Encoder,
- Embedded Video,
- External Video.

- **Publishing Flash Documents**

- Testing,
- Bandwidth Profiling,
- Metadata,
- Publishing for Web Delivery and Standalone Delivery.

The fundamental concepts and features of Adobe Flash CS4 Professional, plus several more advanced features such as ActionScript 3, needed to create interactive, audio-visual content optimised for web delivery and as a standalone projector.
