

Creation of HTML Emails with Adobe DWeaver/Photoshop 2 Day Course

Until recently text-based email was the most popular way to communicate, however with the advent of HTML email you can now create and send a message that is much more visually appealing and when designed and built correctly will affect the reader's ability to process, enjoy and respond to the content. HTML emails are now often used as a valuable tool in email marketing campaigns.

This course will use two industry-standard tools, **Dreamweaver CS4** for the HTML and layout and **Photoshop CS4** for the creation of optimised graphics and images. The combination of the two programmes will enable you to design and build professional HTML emails and e-shots.

Who should attend?

Graphic/Web designers, or people transitioning into an online marketing or website related job. This course is aimed at delegates with little or no experience of HTML, Dreamweaver or Photoshop. At the end of the course delegates will have created and built a professional working HTML email.

The course on each day runs from 9.30 am to approximately 4.30pm.

COURSE CONTENT

- **How do HTML emails work?**
 - The 'bigger picture' – webmail & email clients
